making digital work

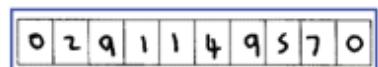

The EzeScan ICR module is separately licensed and adds handwriting recognition from boxes and forms, when used in conjunction with the optional KFI module.

The ICR module allows EzeScan to automatically read numeric and alpha numeric handwriting and pass metadata into the EzeScan KFI screen for processing. This simplifies the processing time for an operator, as they do not need to index the information manually.

How easy is it to use?

The EzeScan KFI module will automatically find the zone that needs to be read by the EzeScan ICR module and will return the handwritten value to the KFI indexing panel.

Phone:

EzeScan will then check the % confidence level of the result and if met, EzeScan will automatically move to the next field. If the confidence level is not met, EzeScan can either move the image to an exception queue or pause, and the EzeScan operator can then verify the value and then move to the next index field.

Note: For accurate ICR results it is recommended that characters are written in a box.

The EzeScan Advantage

EzeScan provides fast, cost effective business solutions including simplified back scanning, automation of invoice processing, forms data extraction, mailroom/correspondence automation and highly integrated EDRMS imaging. Compatible with all major scanners and with thousands of installations in Australasia, North America and the UK, EzeScan is your ideal production batch capture solution.

Who is Outback Imaging?

Outback Imaging is a research and development company specialising in document capture and business process automation. EzeScan is Outback Imaging's flagship document capture product suite. Our products enable clients to substantially reduce the cost of deploying data capture and information processing solutions for unstructured, semi structured, structured hardcopy and electronic documents including email.

To request an evaluation copy of EzeScan or to see a product demonstration please contact your local EzeScan representative.
